PARQUET OF THE HIGHEST CLASS

# UNIQUE. SUSTAINABLE. CUSTOMIZABLE.

Glan-Park® offers diverse design possibilities for innovative space concepts. The **Glan-Park® DesignLine floorboards** are available in oak, which can be refined in various textures and over 40 color variations. This variety of combinations offers numerous design possibilities for your floor.

We have the highest quality standards and place great emphasis on sustainable and environmentally friendly processing. For this reason, we manufacture all **Glan-Park® DesignLine floorboards** in our own production facility in the Lüneburg Heath. The support panels consist of 9 or 12 mm thick birch plywood sheets from Scandinavia, which are produced with excellent oak veneer layers in 4 or 6 mm thickness in four different grades at our factory in Dömitz. The processed oak wood mainly comes from Germany and France.

***And we can do even more:***

*feel free to ask us about other types of wood. Upon request, you can receive your parquet in walnut, ash, beech, oak or larch – of course from sustainable forestry.*

## SURFACES

The refreshing liveliness of the parquet is achieved through the surface you choose. This not only varies the appearance of the floor, but also the feeling that accompanies you with every step. The respective character is shaped by brushing with wire or nylon brushes. This specifically highlights and emphasizes the grain of individual woods. The individual processing makes each board a unique piece.

# INSTALLATION + ASSEMBLY

The floorboard structure consists of a total of 13, 16 or 18 mm with a 4 or 6 mm thick wear layer. The curved outer contour is highlighted by a 2.5 mm beveled edge. This creates a calm, naturally curved joint in the installation pattern. Depending on the type of wood, a different play of colors is created by changing light incidence.

## RUSTIC

## SORTINGS

Each sorting of **Glan-Park® DesignLine-boards** has its own unique character and determines the overall effect. Depending on the expression of knots, sapwood, and color differences, the floor appears calm and elegant to lively and rustic.

### SIMPLY ELEGANT

The top of the wood must not have knots\*, sapwood, or cracks. No large color and structure differences are allowed. The pieces are processed both with tangential and radial cuts. \*Knots with minimal dimensions are occasionally permitted.

### COMPLETELY NATURAL

The top is free of sapwood and cracks. Healthy, firm, small knots as well as natural color differences are allowed. In plank floors, slightly larger knots may occur.

### STRIKINGLY MARKANT

The character arises from a striking grain of the wood, knots, and a lively structure. The knots must be firm. Some sapwood and healthy knots are permitted. Cracks may occur occasionally.

### BOLDLY RUSTIC

The character is characterized by a very lively structure. Small cracks as well as sapwood and knot holes are allowed.

# 40 + 2 COLOURS

Rubio<sup>®</sup> MONOCOAT

*The colors shown were applied to oak wood. The colors shown are indicative and not binding.*

When choosing the color tone, trust your instinct and imagination. Colors are perceived individually and can be felt much better than defined. And a shade that will surround and accompany you on a large scale for many years should correspond to the furnishings and style as well as your personal taste. More than forty standard colors for **Glan-Park<sup>®</sup> Design Line boards** give you ample room for movement and decision making.
